

Glover Energy Committee 2/19/24

Attending- Mariel, Ann, David, Sara, Angela

E Bikes- Start in April depending on the weather

MERP Audits-

Town Hall- Jack reviewed and had a couple questions re- insulation what is there and how much more is there, programmable thermostats, if we upgraded to pellet heat is there storage space for the pellets? Need to keep in mind resilience ie flooding in any upgrades that we do.

Town Clerk/Library-single paned windows, how much heat are we actually losing with the storm windows in place. How often is the air conditioning used? Does or could the heat pump in the vault help with lowering the temperature. How much hot water is used? Does it make sense to replace present system? We like the idea of having ev chargers installed, are there insurance issues associated with that. How does maintenance work on charging stations?

Fire Station- Mariel to reach out to Phil Brooks to see if he has further reviewed the Fire Station audit.

Mariel to reach out to Carter @ NVDA to discuss next steps of the MERP process

Thermal Imaging camera- David to look into what it might cost and could we get one and then help the community use it in their homes

Town Meeting- We'll have a table, hopefully will have a trifold brochure that can be handed out, print out from Kevin, handy easy tips for weatherization. EVT offering free virtual home energy audits, Mariel to get more info to have a display at Town Meeting. Windowdressers- need Rack cards from Jack and sample insert.

Glover Day - We will participate with a table and maybe come up with a fun giveaway or something

Save Energy NEK- going well, they are well organized; have a couple of energy forums/gatherings scheduled in the coming months

Next Meeting March 18th 4pm @ the Glover Library
