Glover Energy Committee June 15th

Attending- Ann, Mariel, Sara, Angela

Guests- Phil Brooks, James Coe

MERP-

Fire Dept - Phil asked if still on schedule, as of now yes. Has some plumbing work that will be happening next week and wanted to make sure that the roof won't be worked on, if so would reschedule plumber. Phil asked for add-on cost for automatic transfer for generator to compare quotes. James will forward that to him. Also talked about location of new electric panel and what makes the most sense. This will be determined by electrician when they are on site. James will check on new smart thermostats to make sure that is still in the scope of work. Will schedule walk-through with Phil and contractors probably next week.

Municipal Building - Started insulation on the wall in the Town Clerk area, found that in most places there was insulation already so talked about removing more siding to increase the insulation. James will reach out to Spates for some options. Insulation has been completed upstairs.

Town Hall - Pivoted to the town hall week of 6/15 because the senior meal is not happening this week so they are working on the windows in the Town Hall basement. Adam asked if carbon monoxide detectors were being replaced, James will check, he doesn't believe it is still part of the scope, but will confirm.

E-Bikes - Openings in August, will advertise some more

Window Dressers - Measurements have started

Holland Energy Fair - Mariel tabling there, will get details to see if any of us can join

Next Meeting - July 6th
