

Glover Energy Committee June 4th  
Attending: Sara, David, Angela, Mariel, Ann  
Guest: Debbie Now

Thermal Energy Networks- How they can be utilized in municipalities by connecting multiple buildings, larger buildings like grocery stores add heat into the infrastructure that is then shared with smaller buildings and means less energy used to heat the water and air through the pipes. Municipalities can do it themselves or have 3rd party financial backers, like maybe . Angela asked about soil types, Debbie said that rock is actually better because it is a good heat conductor, sand is less than ideal. Need to have a battery backup or generator for power outages.
