

SHADOW LAKE DAM NOTICE

Ben Green – Dam Safety Engineer for the state of Vermont, inspected Shadow Lake Dam Tuesday, September 17, 2024. The results of this inspection will be posted on the Glover website when we receive them.

The town will systematically remove stoplogs to provide a minimum of 2 feet of drawdown in the lake to continue the plan to reduce loading on the dam and reduce seepage pressures in the embankment. The town previously removed a 12” stoplog on July 31, 2024, today a 6” stoplog was removed. Sometime in the near future, an additional 6” will be removed completing the 2-foot request from the state.
